The request for reconsideration, filed on March 26, 2003, has been considered but does not place the application in condition for allowance because of the following reasons:

A) Applicant argues (page 3, last paragraph to page 4, line 9) that Herman et al reference teaches only the amplification of methylated fragments and does not teach the amplification of both methylated and unmethylated fragments of the instant invention. This argument is not persuasive. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., the amplification of both methylated and unmethylated fragments) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Moreover, Herman reference clearly teaches the amplification of both methylated and unmethylated fragments (Column 23, line 67 to Column 24, line 3).

- B) Applicant also argues (Page 4, last two sentences) that Herman reference does not teach the step(e) of removing any non hybridized probes from the immobilized DNA samples and there would be no reason to hybridize any probes to the MSP amplificates for the purpose of indicating methylation and there would be no reason to remove any non-hybridized probes. This argument is not persuasive. Herman clearly and inherently teaches the separation of non-hybridized probes in the Southern blot technique (Example 2 and Figure 1). Moreover, it is well known to an ordinary practitioner skilled in the art that in any hybridization reaction (no matter how specific the target sample is), there is always a molar excess of unhybridized probes, which must be removed by washing and other means to reduce the background signal of hybridization.
  - C) Applicant also argues (Page 5, first two lines and page 6, line 3 of third paragraph, and

page 8, line 3) that each references individually does not teach all the elements of the claimed invention. This argument is not persuasive. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

D) Applicant also argues (Page 5, lines 3-4 and page 6, lines 5-9 of third paragraph, and page 8, lines 4-8) that there is no motivation to combine the references. This argument is not persuasive, especially in the presence of strong motivation provided by Koster since Koster states, "In addition, because the instant disclosed processes allow the nucleic acid fragments to be identified and detected at the same time by their specific molecular weights (an unambiguous physical standard), the disclosed processes are also much more accurate and reliable than currently available procedure (Column 4, lines 50-55)". Similar logic is applicable to other combinatory references.

In view of the response to arguments, the request for reconsideration has not been found persuasive and therefore not entered.
